Product Engineer with **8+ years** taking products from concept to production — blending **product thinking, UX, and full-stack engineering**. Today I design **AI agents and AI-assisted workflows** that automate operations, review data, and generate knowledge — owning initiatives end to end and driving engineering decisions for the teams around me.

EXPERIENCE

Product Engineer (Head-of-Eng scope)

Feb 2026 — Present

Bunny Studio · San Francisco, CA · Remote

- Lead product initiatives from concept to production, combining **product thinking, UX design, and full-stack engineering** to ship features end to end.
- Operate with a **Head-of-Engineering scope** — analyzing team costs, prioritizing the roadmap, and driving engineering decisions and cross-team alignment.
- Accelerate delivery with **AI agents and AI-assisted development** (Claude Code, Cursor, Codex) woven into the team's workflow.

Founder & Engineer

2025 — Present

Aurant · aurant.lat · Remote

Founded and build **Aurant** end to end as the engineer, leveraging **AI agents** to design, ship, and iterate the product quickly across the full stack.

Full Stack Engineer

Sep 2025 — Jan 2026

ARKHO · Chile · Remote

Modernized the core platform of **Chile's Customs agency (Aduanas)** — delivering full-stack, cloud-native services on **AWS** for a high-stakes, large-scale government system.

Software Engineer

Dec 2021 — May 2025

Torre.ai · Remote

- Built and owned core product surfaces — application flow, candidate genome, and search — in **TypeScript, Vue.js, and Scala**, delivering seamless, high-performance experiences across the stack.
- Led a web-performance initiative that lifted **Core Web Vitals by 83%** and cut load times by **87%** via lazy loading, code splitting, and CDN caching — boosting SEO and engagement.
- Shipped **LLM-powered Match & Rank** (GPT, Gemini) that improved candidate matching by **~30%**; built scalable AWS solutions cutting infra costs **10%**, and led the team as tech lead during absences.

AI & TOOLING

Design **AI agents** that automate operations, review data, publish content, and generate knowledge — shipping with AI-assisted development.
